

Datatrunk

Concealed, secure cable management

Support Comms' newest product offers a large-capacity cable distribution system that is secure, well organised, and hidden from view.

Concealed, secure cable management. Support Comms' newest product offers a large capacity distribution system that is secure, well organised and hidden from view.

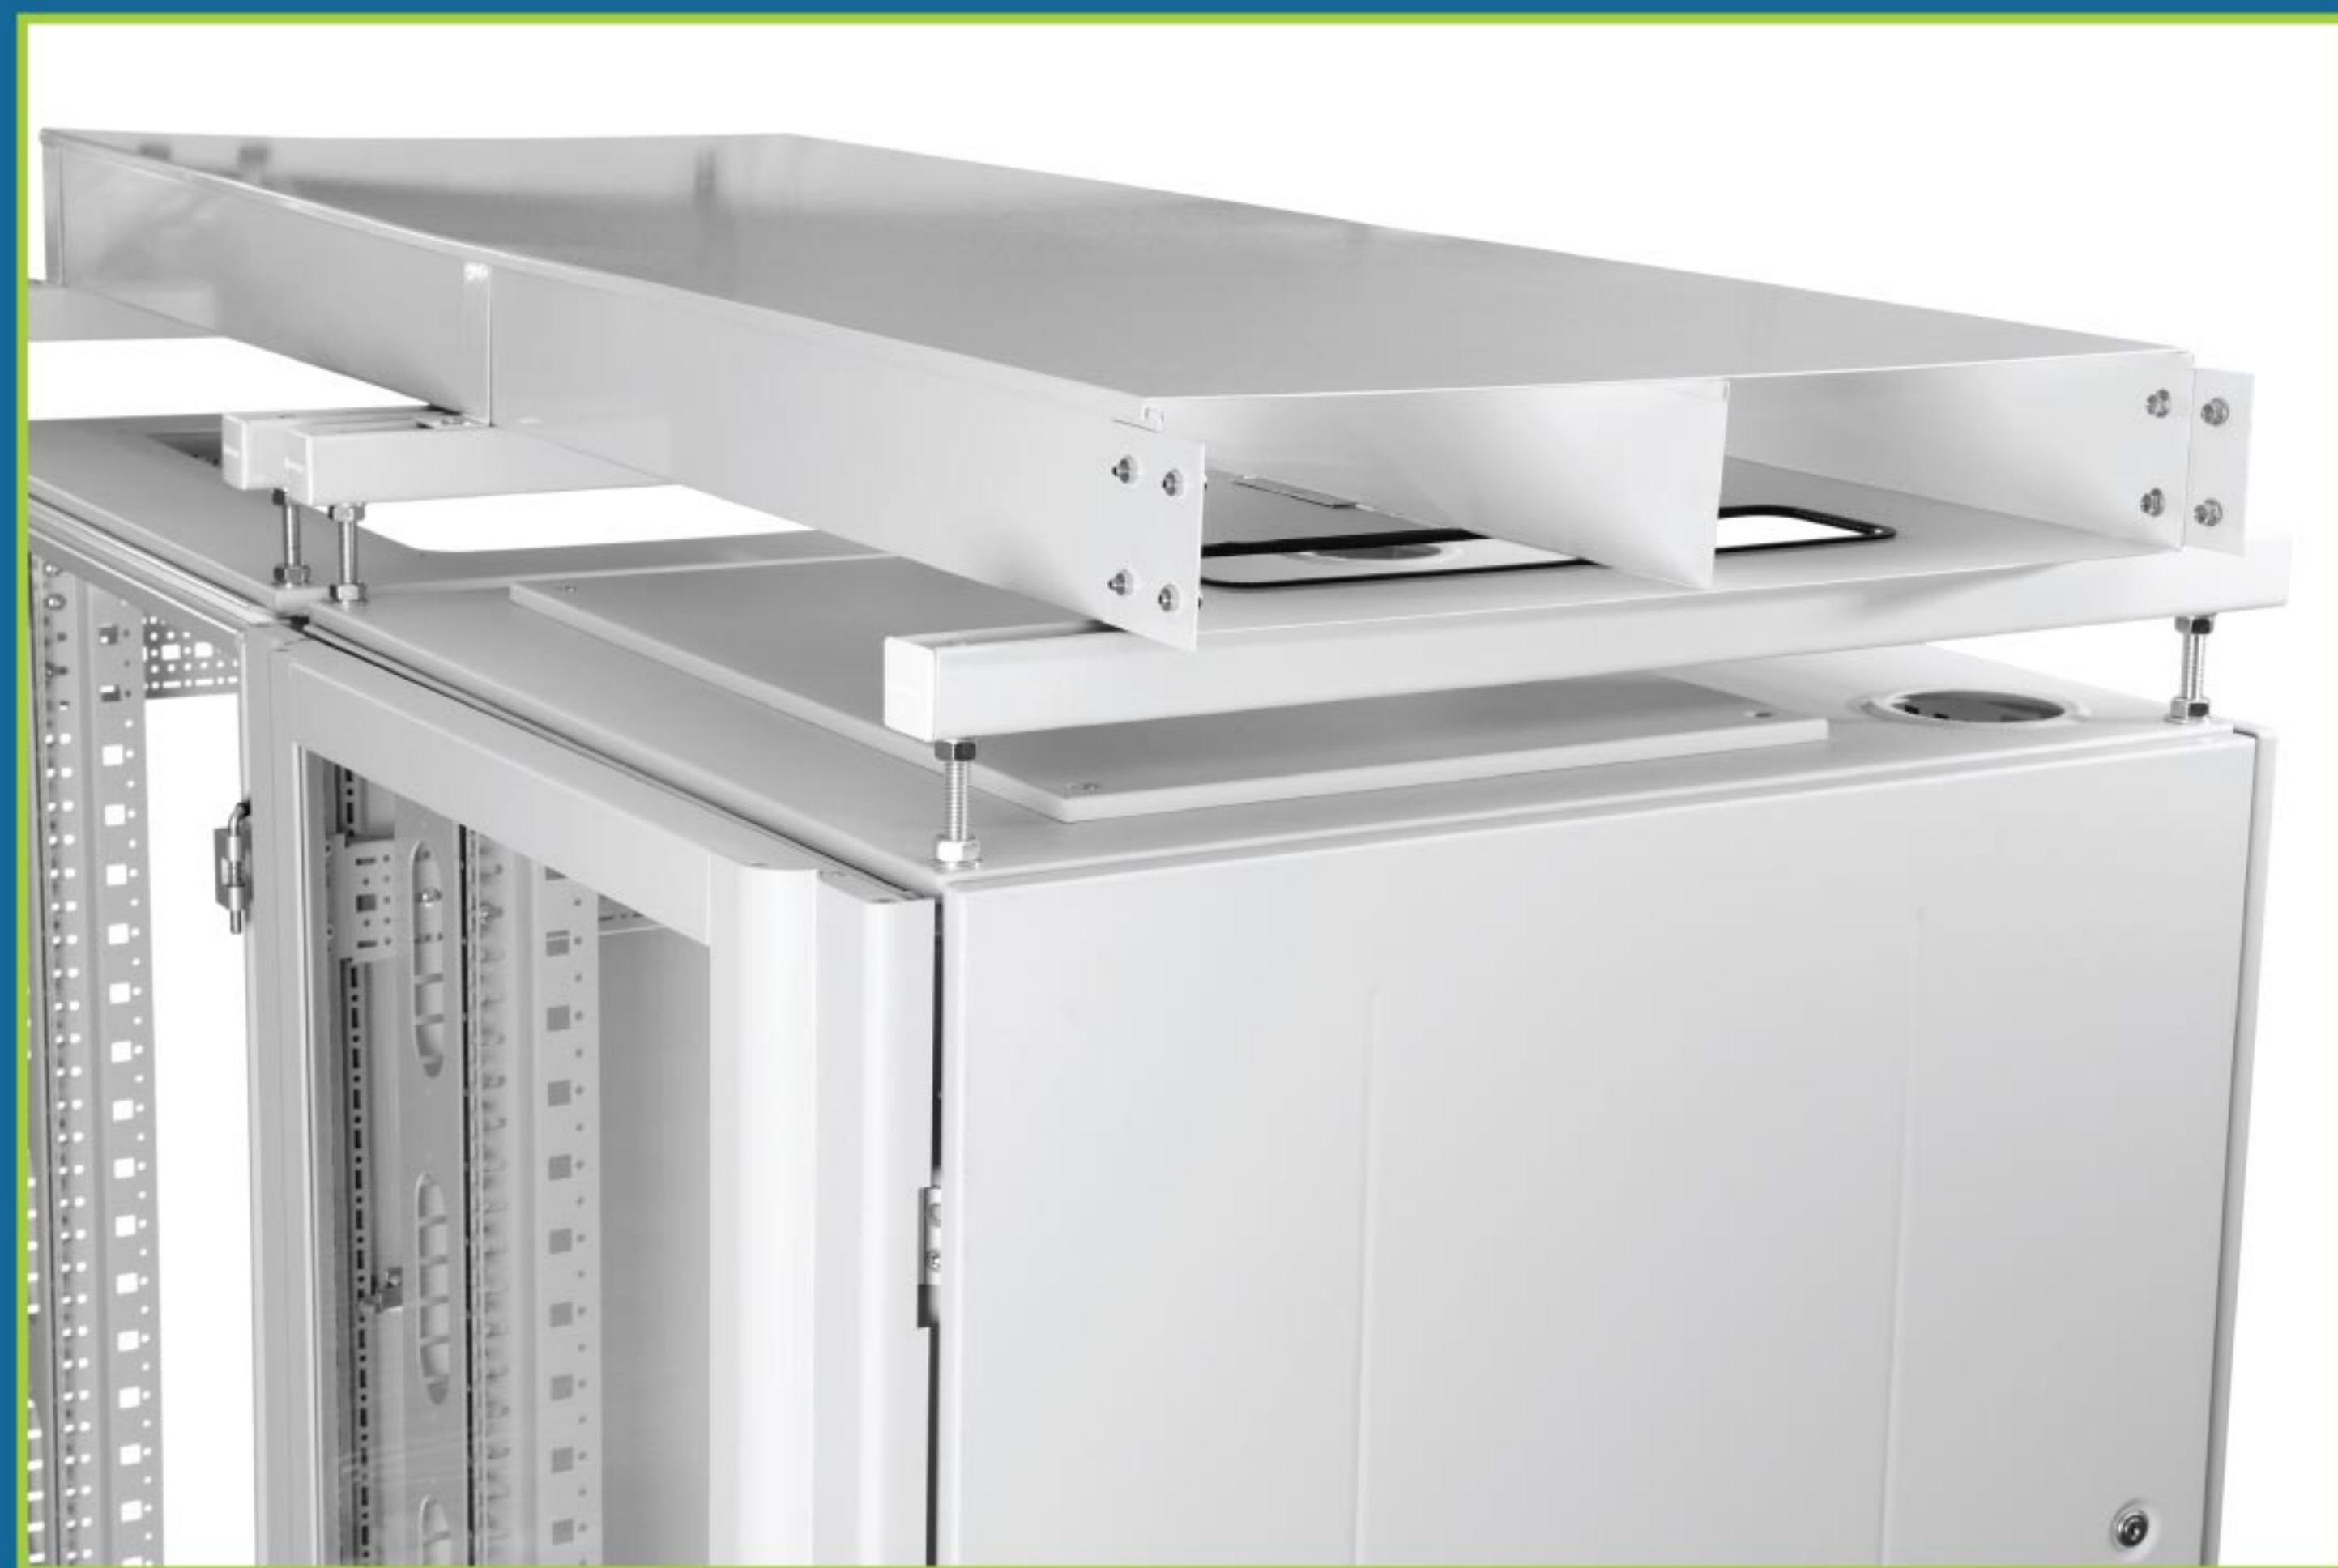

An efficient, large capacity, bespoke cable distribution system, colour coded to minimise the visual impact on the data centre and c/w with pre-positioned, fully gasketed, cable outlets to facilitate easy access to the cabinets/racks, Each system can be custom sized according to the clients own capacity requirements and be future proofed.

Datatrunk can be divided into channels as required, suitable for organising and separating data cables, fibre optics and power cables.

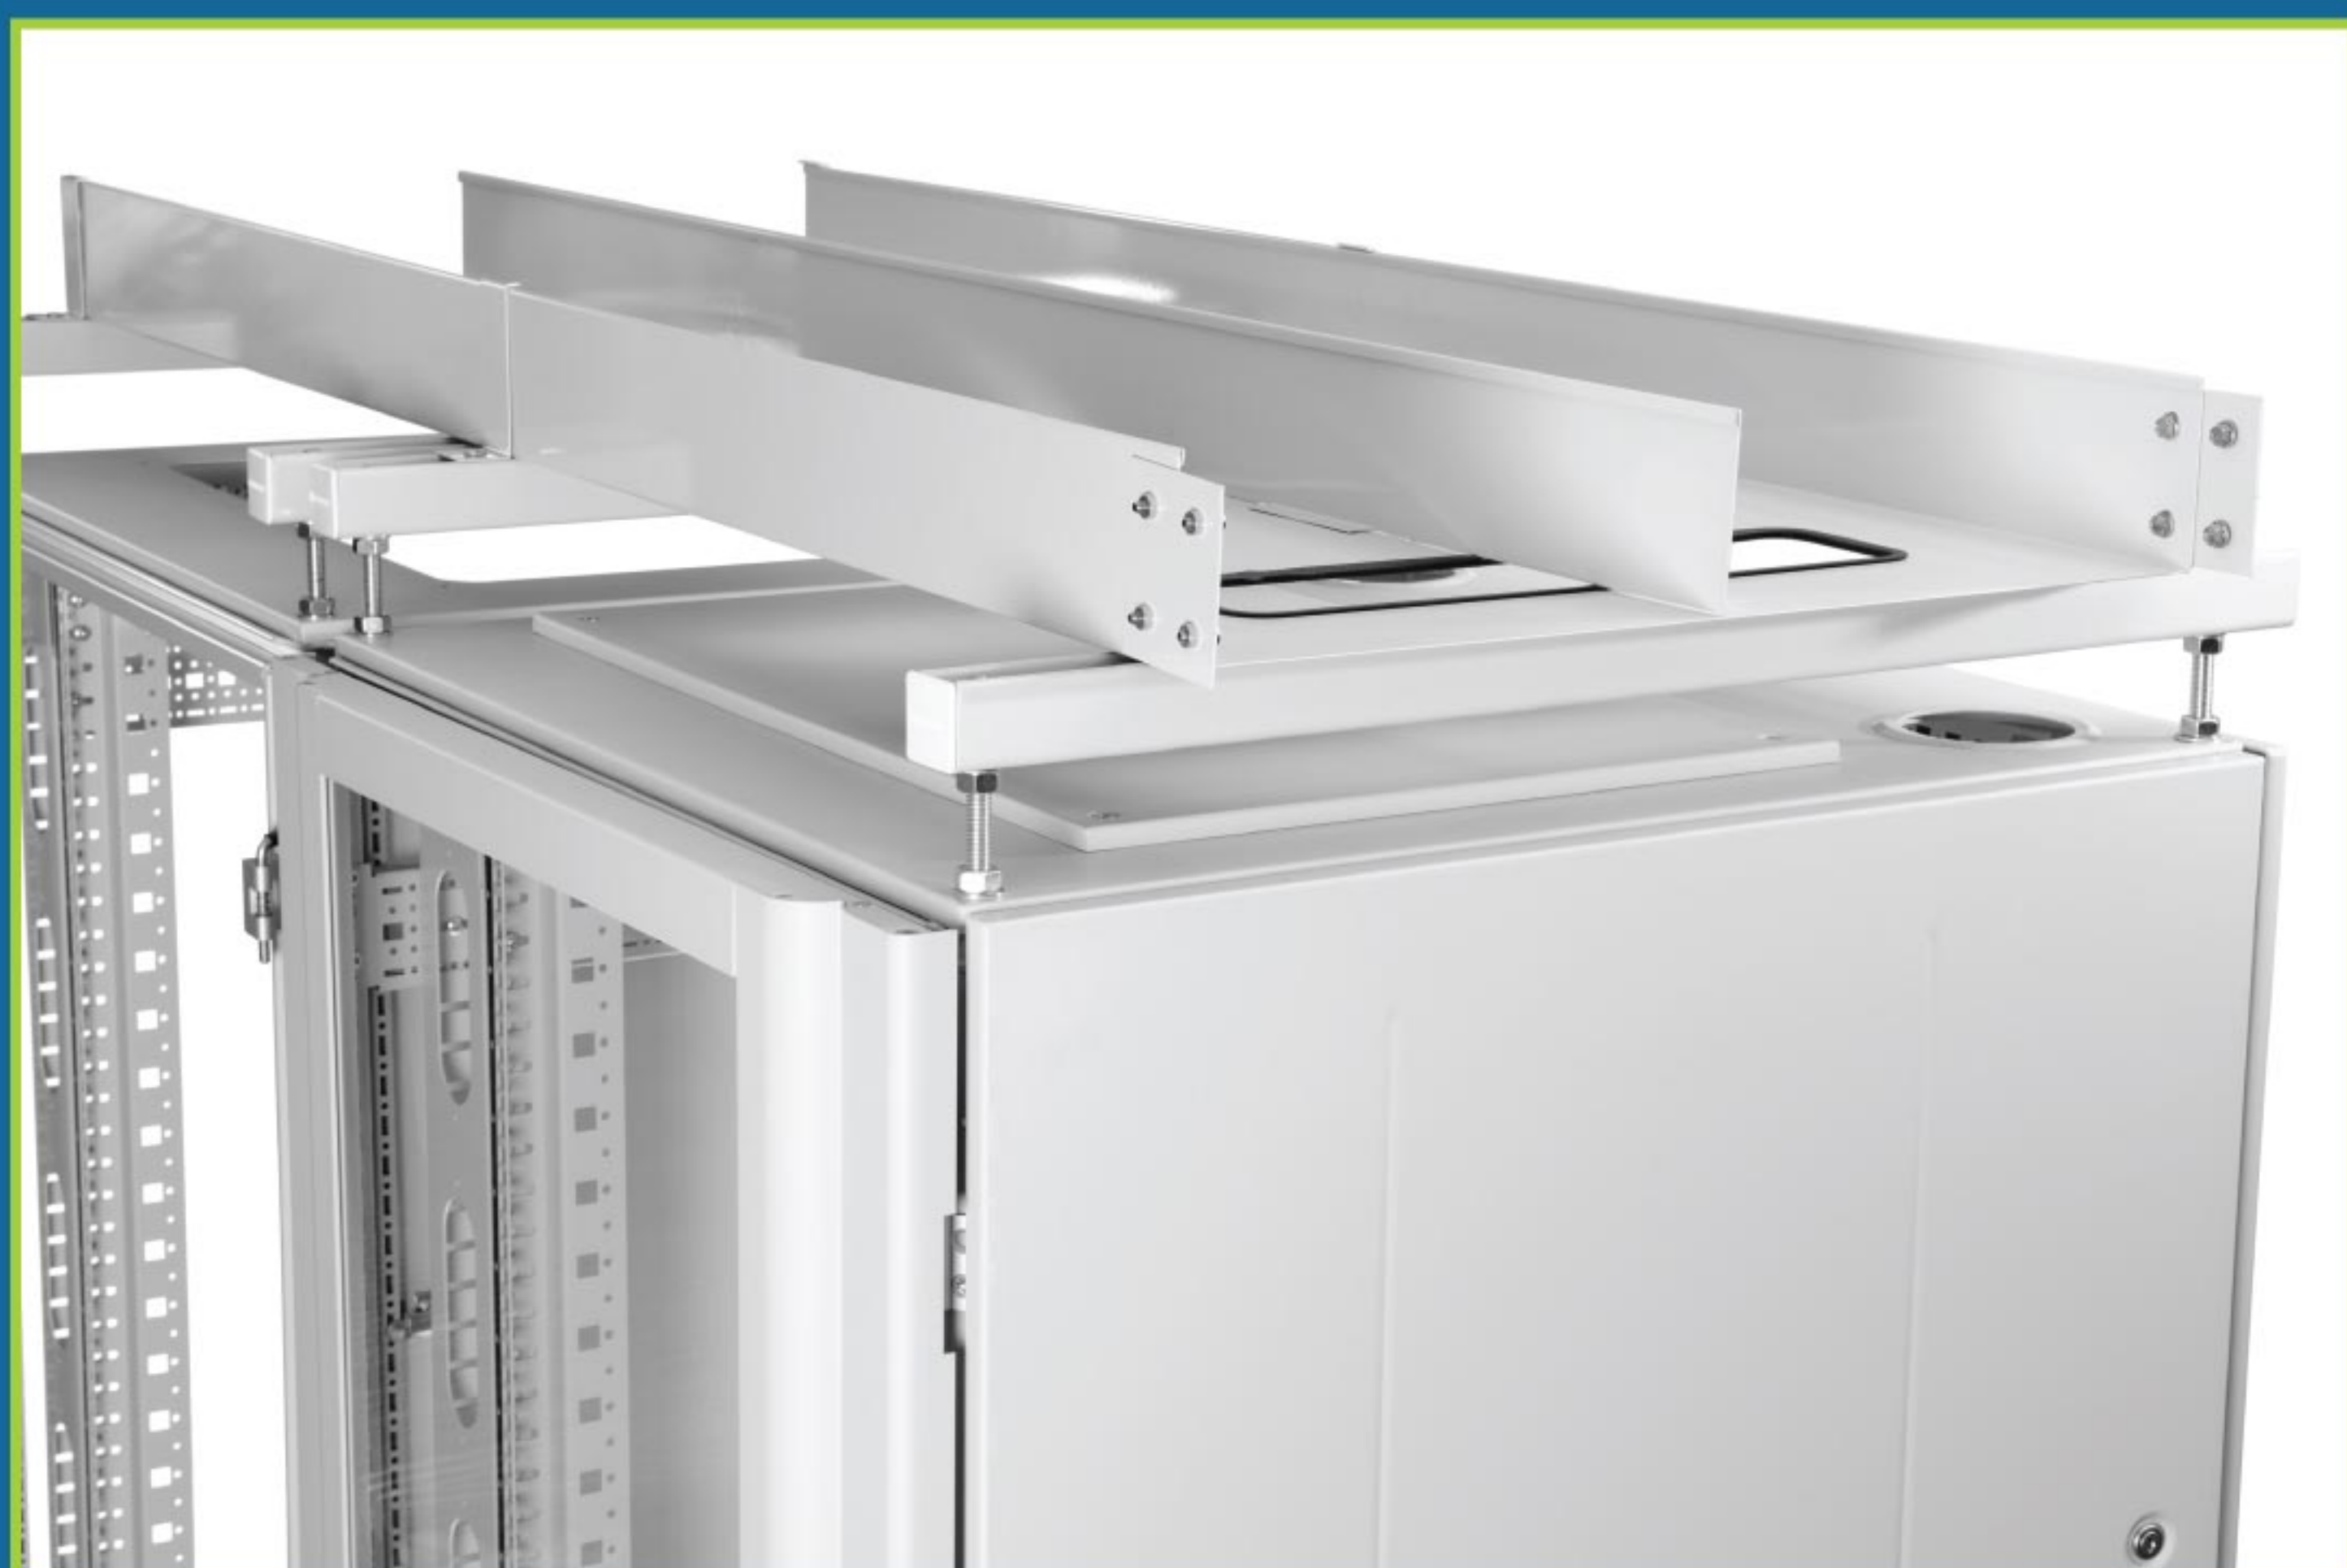

Manufactured from galvanised steel, the ducts can be powder coated in any colour, enabling the entire containment system to be concealed from view behind a smart, uniform finish.

As security and safety is of paramount importance in datacentres, Support Comms' Datatrunk systems can include a Datatrunk lid, which safely contains the cables and protects them from dirt and dust. Lids can also be supplied with tamper-proof fastenings for additional peace of mind.

Datatrunk can be made in a full range of sectional sizes and is manufactured in 2 metre lengths so it can be easily transported and installed. A full range of angles, reducers, internal barrier kits and support brackets are also available.

• Datatrunk With Security Lid

• Datatrunk Open Top

• Datatrunk Cable Outlets

• Datatrunk Coupler

• Datatrunk Hold Down Clamp

• Datatrunk Support Bracket
